

TRDC TOKEN

THE RAPID DEVELOPMENT OF BLOCKCHAIN TECHNOLOGY

► Introducing the Traders Coin Project

What can help crypto investors in this market ? That is the question that triggered the idea of the **TRDC** project. Started with the objective of a platform to provide a demo for beginner traders and organize competition to select top skillful crypto investors and reward them with money. A way to help that with skills but with no capital, and that with capital with little experience.

Such an idea to be available and ready to be used, it must stand on a strong system. So it came to the importance of creating tools first, and combining them later to make a useful toolbox for traders.

TRDC is a token created on Binance smart chain which objectives are :

- A trading platform
- A wallet that tracks the user's wallet and provides him with his buying and selling information, entry and exit areas, profits and losses
- A system for tracking whale wallets, analyzing their movements, and studying market trends
- A system for copying transactions of large wallets, where the user's wallet is linked to a whale's one and copies the buying and selling transactions according to the user's capital
- A launchpad platform

▶ Introducing the roadmap

- Overview

Phase 1 :

- TRDC wallet v2 Android and IOS version
- TRDC Dex platform V2
- TRDC Diamond hands airdrop event

Phase 2:

- Extending TRDC communities by adding an Asian community
- Starting online crypto Forums
- Staking events
- TRDC CWallet, SWallet, SWallet prototypes

Phase 3:

- TRDC wallet and TRDC Dex platform updates
- TRDC CWallet & SWallet Beta versions
- TRDC Gaming project whitepaper (Metavers)

Phase 4:

- TRDC wallet and TRDC Dex platform updates
- TRDC CWallet , SWallet , XWallet V1
- TRDC NFT project whitepaper

Phase 5:

- TRDC wallet and TRDC Dex platform updates
- TRDC annual team evaluation report
- TRDC Diamond hands airdrop event
- TRDC Launchpad

► Details

Phase 1 :

- **TRDC wallet v2 Android and IOS version**

TRDC Wallet allows users to have an overview over the crypto market, explore the different tokens and manage their own wallet. It provides users with the possibility to swap on PancakeSwap and 1Inch servers directly on its interface. An android version was released first as a beta version. Before the end of December the second version of TRDC Wallet will be released for Android and IOS smartphones.

- **TRDC Dex platform V2**

TRDC Dex is a decentralized exchange developed by TRDC team in order to make swapping easier and fast with features like auto slippage calculation and high speed transaction with low fees.

- **TRDC Diamond hands airdrop event**

TRDC will reward its loyal holders for supporting the project and assisting the team in many ways. Holding the token and not buying is never easy especially when they see the chart goes up and down over and over, and the token shall reward their patience.

Phase 2 :

- **Extending TRDC communities**

TRDC started with an Arabic community, then added English and Turkish communities to expand its audience. The next goal for the TRDC team is the asian population. And then, doors will open for another one.

Arab telegram Community : https://t.me/trdc_arab

English telegram Community : https://t.me/trdc_family

Turkish telegram Community : https://t.me/TRDC_TR

- **Starting online crypto Forums**

People like to know about coins and tokens, but they need to know more about crypto. Spreading awareness in the non crypto population and educating people about the dangers and benefits of crypto is a must, and sometimes it cannot be done on crypto tokens groups. A forum is more suitable for the task.

- **Staking events**

TRDC holders can gain more tokens using staking events organized by the TRDC team in collaboration with exchange platforms.

- **TRDC CWallet, SWallet, XWallet prototypes**

TRDC C, S and XWallets are tools that will make any crypto trader happier. Being able to monitor gains and losses and have a complete history of the transaction made by the user wallet. Having data to analyse the market and inspect the whales movement or even cloning a whales wallet are tools that TRDC have in plan.

The prototypes of some or all the wallet will be presented. And from there the development team is going to take remarques and feedback to make the beta version.

► Details

Phase 3 :

- **TRDC wallet and TRDC Dex platform updates**

After using the TRDC Wallet and TRDC Dex for months, a new version will see light in the form of fixes, patches and new features.

- **TRDC CWallet & SWallet Beta versions**

CWallet is the tool that will allow whale transaction cloning. It is where a user can link his wallet to a whale's wallet and copy it's transaction automatically. A tool used by crypto veterans which will be easy to use by TRDC investors.

SWallet is the tool that will provide a dashboard about the user wallet. It will show entry points and exit points made by the user on trades, profit made or losses. It's a tool to translate blockchain data to readable ,visual and easy to read info.

- **TRDC Gaming project whitepaper (Metavers)**

For an all out token solution for crypto traders, gaming is a must. TRDC team plans to create a game where investors can enjoy their free time and gain TRDC tokens and other prizes.

Phase 4 :

- **TRDC wallet and TRDC Dex platform updates**

Providing updates for the TRDC Wallet and Dex platform to ensure continuous stability and high performance.

- **TRDC CWallet , SWallet , XWallet V1**

XWallet is the tool that is going to provide the users with a market analysis based on crypto data and whales movement. The objective is to help the users make better investment decisions.

First published versions of the C, S and X wallet will be available for TRDC users to test and give feedback.

- **TRDC NFT project whitepaper**

Trading NFT will be possible on the TRDC platform. Show your talent and creativity and get paid for it.

Phase 5 :

- **TRDC wallet and TRDC Dex platform updates**

Updating the TRDC products, fixing issues and adding new features to make them better and more useful.

- **TRDC annual team evaluation report**

After completing the first stable versions of TRDC project tools, It's time to reflect on mistakes and appreciate the good work done by everybody. Doing a team evaluation is a way to strength the project and make the necessary changes

- **TRDC Diamond hands airdrop event**

TRDC loyal holders are to be rewarded for not selling the token and support the team.

- **TRDC Launchpad**

TRDC Launchpad, a project to help new projects get audience and funds. The goal is to introduce the next gems to crypto populations.

▶ Introducing TRDC role

Problems :

- Growth of scam tokens and scam projects draining a lot of people's investments and life saving
Not everyone has the suffisance knowledge to differentiate between scam and real projects.
- The need to use Dapp and browsers to connect wallets to PancakeSwap and 1Inch platforms to swap.

Solution proposed by TRDC :

- **TRDC** will provide investors with multiple data resources through tools : C , S and XWallet
- **TRDC** Wallet provides direct swapping using PancakeSwap and 1Inch servers with personalized trading settings directly on the **TRDC** Swap Wallet available on Android and IOS.

▶ TOKENOMICS

- Maximum supply : 210 Million
- Locked token 55.5 Million
- Token team 30 Million " for 15 month "
- Token to be burned : 10 Million
- Token for (Development and Marketing): 5 Million
- Token for the Airdrop : 2 Million

Maximum
supply : 210
Million

▶ TRDC products

• TRDC Swap Wallet

Store, swap and explore with one tool

Market

get real-time market data easily & fast

Wallet

Add, track send & receive, your cryptocurrencies with ease

Category

Explore, learn and manage your favorite tokens and coins

Swap

Swap cryptocurrencies in high speed directly on the Wallet

News

Receive the latest news on cryptocurrency

Settings

Flexible, customisable, and implements multi-layer security

• TRDC DEX

Trade in V1, V2 and V3 with auto slippage :

▶ Team

The **TRDC** team began with its owner and two developers, and it got bigger and enforced by none other than its holders who volunteered at times and became more committed to the project. The list of the team members may change as new talents are welcomed to contribute, and potential lack of free time for current and future members. The goal is to build the project to a point where it's self-running and self-financing.

The final goal is to make the decentralized platform a reference for crypto traders and plan to keep it updated with future possible trading strategies that can be coded and made public to everyone. This cannot be done without the contribution of the mass crypto experts and veterans. We believe that this way, we can contribute to indirectly pushing the crypto market a little bit forward.
